

Computers

Curriculum Overview

At St. Peter's we have contracted with COMPUTER EXPLORERS to provide technology instruction to our students. COMPUTER EXPLORERS teachers meet with classroom teachers to develop lesson plans in science, language arts, mathematics and social studies. We challenge our students to create projects that make use of multiple technology skills including:

Basic Computer Operations

- Word Processing
- Spreadsheets
- Databases
- Graphics
- Multimedia Presentations
- Internet Exploration and Research
- Web Site Design

In class students will use project-based learning that integrates core curriculum content. By integrating technology into the core curriculum St. Peter's is able to reinforce the educational concepts our school teaches in each classroom and put practical technology skills to work.
